

All frame components are E-Coated (electrophoretic cathode metal coating), shelves and sides are hot-dipped galvanised and powder-coated to protect against heat, frost, corrosion, and any other weather influence.

The worktop is made of carefully polished, acid-proof food grade stainless steel that is resistant to heat and is easy to clean and maintain. The precise opening in the worktop is laser cut and grill stand shelf can be adjusted in 30 mm increments (7 positions) to fit your specific kamado grill model.

Front panels are made of HPL (High pressure laminate) – extreme weather-resistant, easy to clean high-pressure laminate made in Austria. HPL panels are frost and heat resistant under constant temperature load -80 °C to 80 °C. HPL panels come printed on both sides. The core is flame-retardant and the surface is lightfast. Extreme weather protection consists of double-hardened acrylic polyurethane resins. Unlike solid wood, HPL is absolutely no-maintenance material. Abrasion, impacts, scratches, and extreme temperature variations – none of these will be an issue from now on. The panel surface closely resembles traditional hardwood and even feels like hardwood when you're touching it.

BIG4SPACE 180 kamado table is designed in the UK and produced in Lithuania.

### **Dimensions**

Width 180 cm

Depth 98 cm
